

Press Release

Sword CTSpace, PG&E, Ameren, EMC, and IBM represented among attendees of 2011 Nuclear Information Management Conference

Discussion to surround nuclear information and records management topics, including hot-button issues like the Cloud and data security. Sword CTSpace's Tim Fleet to deliver a presentation on PDF rendition and business process automation.

San Francisco, USA – July 6, 2011 – The Nuclear Information and Records Management Association (NIRMA), a non-profit corporation comprised of nuclear energy and information management executives and experts, will hold its 35th-annual Nuclear Information Management Conference on August 14-17, 2011, at the JW Marriott Resort and Spa in Summerlin, Las Vegas, Nevada. Befitting a conference whose title is "Forging Excellence in the New Era Across the Globe," presenters from such companies as PG&E, Ameren, Xcel Energy, and EMC, and from such organizations as the Nuclear Regulatory Commission (NRC), the National Archives and Records Administration (NARA), the Los Alamos National Laboratory, and the Association of Information and Image Management (AIIM), will discuss records management, document control, regulatory compliance, Cloud information management, cyber security, e-discovery, Sharepoint, and plant construction and decommissioning in a total of 38 planned sessions.

NIRMA's yearly NIMC conference has always been a highly-attended and highly-regarded event among nuclear energy and information technology professionals due to the quality and prestige of the presenters, networking and business opportunities, its agreeable location (Summerlin, NV, is a 100,000-population planned community and a 15-minute drive from the Vegas Strip), and Certified Records Manager and Nuclear Specialist exams tutorials. This year's conference will be especially interesting, however, as a result of dramatic developments in both the nuclear and IT industries, namely the Fukushima disaster and recent flooding and wildfire threats to American nuclear plants and facilities on one hand, and the increasing popularity and improved technology of Cloud computing on the other.

NIRMA, on its website nirma.org, states as its purpose to "provide guidance to commercial and [U.S.] Department of Energy (DOE) facilities in the areas of quality records programs, regulatory compliance activities, electronic records initiatives, document management technologies, and knowledge management issues." Its six declared functions are to 1) develop nuclear industry information management standards; 2) analyze the issue of long-term record management in relation to decommissioning and radioactive waste management; collaborating with the 3) NRC and 4) other organizations such as AIIM and the Nuclear Energy Institute (NEI) on these and other information management matters; and to provide 5) education and training and 6) professional certifications in its areas of expertise. Its board of directors includes executives and experts from Entergy, Xcel Energy, Ameren, and NARA.

Sword CTSpace, a global leader in providing document management and collaboration workflow applications to the construction and engineering industries, is a sponsor of the NIC and will exhibit and present at the conference. Its presentation, "Tips and Technologies for Automating the PDF Rendition Process" (Session #27), will provide attendees with practical and easy-to-emulate tips for automating their document-centric business processes that will reduce errors, improve efficiency, and ensure compliance. Sword CTSpace's VP of Products Tim Fleet will conduct the presentation in conjunction with Rupin Mago of Adlib Software, an enterprise content transformation solutions company, at 11 a.m.-12 p.m. on Thursday, August 16.

Attendees are also invited to check out Session #16 on Monday, August 15 at 1:30-2:30 p.m., a presentation titled "Enterprise Deployment—Engineering Drawing and Document Management." In it, Ronald Siena of Miria Systems will describe how his company assisted Pepco Holdings in reducing content redundancy and consolidating enterprise data partly by using Sword CTSpace's FusionEnterprise for FileNet P8 solution, an enterprise-scalable engineering content management application.

Anyone that would like to attend NIMC 2011 can do so by registering at nirma.org or by contacting NIRMA Executive Director Jane Hannum at nirma@nirma.org or (603) 332-6476.

- END -

About Sword CTSpace's Fusion solutions

Sword CTSpace is unique in offering both online 'software as a service' (SaaS) solutions (FusionLive) and on premises enterprise solutions (FusionEnterprise).

FusionEnterprise® is a specialist Content Application for your Capital Projects and Operations that works hand-in-hand with your current ECM platform. It has been specifically designed to manage engineering documentation in the context of a construction project or operating plant or facility. It supplements an organization's chosen ECM system (such as IBM FileNet®, EMC Documentum®, Microsoft SharePoint®, Oracle UCM®, or Sword CTSpace's Cimage®) with modules that optimize the business processes of an enterprise from top-to-bottom, from project management to workflow management. FusionEnterprise also provides a complete integration with Sword CTSpace's dynamic Cloud-based Document Management & Project Collaboration solution FusionLive.

FusionLive® is a new Cloud-based Document Management & Project Collaboration solution, specifically designed for the construction and engineering industries. As a next-generation Software as a Service (SaaS) solution, FusionLive brings together advanced document management features from BuildOnline with the robust business processes of Citadon CW, while upgrading its user interface to the most state-of-the-art technology available today. It is hosted at several secure Data Centers around the world. It offers low cost of ownership and the system can be implemented within 24 hours. It takes literally minutes for any new organization to start collaborating on a project.

When integrated, Sword CTSpace's global solution provides a best practices environment that supports a project's entire lifecycle: from design, through construction, and into operations and maintenance.

About Sword CTSpace

Sword CTSpace provides document control, cost management and business process automation solutions to companies with capital assets to design, engineer, construct and maintain in any location in the world. More than 145,000 professionals on 13,000 projects in 56 countries benefit through improved collaboration, enhanced ability to manage schedules and risks, and improved regulatory compliance. Sword CTSpace is unique in offering both online 'software as a service' (SaaS) solutions and on premises enterprise solutions, the latter of which leverage an organization's existing investment in leading ECM platforms. Sword CTSpace is part of the Sword Group of companies. For more information, please visit www.sword-ctspace.com

About Sword Group

Sword Group (NYSE Euronext: FR0004180578 SWP) delivers high value business applications to the world's largest companies globally. With operations in 37 countries, Sword today employs around 1,700 people and generates more than \$270m in consolidated revenue. An international leader in the delivery of Business Process Improvement solutions, Sword's skills, infrastructure and experience help our customers across regulated industries optimize performance, increase efficiencies and maximize return on investment. With flexible delivery options, including On Demand and On Premises, combined with our extensive industry expertise, Sword provides comprehensive support to customers across insurance & healthcare, energy, banking & finance, telecoms, utilities, engineering & construction and the public sector.
